The CRSP will not be distributing this publication. Copies may be obtained by writing to the authors.

Abstract: Social surveys of three farming systems in Thailand showed significant differences. Prawn farming provided a good income and primary employment for farmers, who sold their prawns locally. Tilapia farming provided additional food and income to farmers who were otherwise employed, mostly in rice culture. Shrimp farming provided a good income and employment favored over other job opportunities. It added food locally as well as for export.

This abstract was excerpted from the original paper which was published in *Global Aquaculture Advocate* 12(6):10-12, 2009.
