## Executive Summary

---

One of the most vital aspects of the SR-CRSP is the training of United States citizens and of citizens of countries in which the program operates. From 1978 to 1994, more than 400 men and women participated in SR-CRSP-supported formal degree programs, workshops, seminars, and professional meetings. During these years, approximately 58% of those in degree programs were from the United States; approximately 42% were from the developing world. Approximately 71% of degree program participants were male; 29% were female. Under SR-CRSP and institutional sponsorship, the Ph.D. degree was awarded to approximately 28% of students enrolled in institutions of higher learning, while approximately 64% received the M.S. or equivalent degree. A smaller percentage completed studies for B.V.M./D.V.M. degrees and B.S./B.A. degrees. Among the major disciplines represented by the degrees were breeding and genetics (19%), range management (20%), nutrition (16%), and economics (13%). Smaller percentages of students completed course work and research in animal health, sociology, reproduction, and production systems.

The worldwide impacts of these training programs are reflected in the positions which degree awardees have assumed and the honors which they have received. Egerton University (Kenya), Brigham Young University, the University of Zimbabwe, the University of California-Davis, Hassan II Institute (Morocco), Washington State University, and Michigan State University, among others, have hired SR-CRSP trained men and women on their faculties. Former SR-CRSP trainees include an NSF Postdoctoral Fellow; research scientists in U.S. and developing country institutions; cooperative extension agents; range managers; pharmaceutical company directors; and private consultants. As this worldwide network of SR-CRSP-supported scientists has developed, the influence and importance of small ruminant research has gained increasing recognition and has contributed significantly to the democratization and well-being of society.

## Introduction

The *Guidelines for the Collaborative Research Support Program* provides for accommodation of training needs through graduate degree programs, research assistantships and workshops for participants in both the United States and prime countries in which the CRSP operates (1). This component of training is a reflection of the long-standing tradition of American universities to involve graduate students in meaningful roles in connection with programs of research and study. The *Guidelines* specifically provides that CRSP funds, as well as U.S. institution funds, may be used for support of host country and U.S. students, as well as for "other junior U.S. scientists" on research necessary for implementation of problem-solving activities (1). Such funding and research involvement strive to ensure that graduate students and associated research personnel at U.S. institutions and at overseas sites have active and meaningful roles in projects directed toward the fulfillment of CRSP goals. One major outcome of a training system such as this is the introduction of CRSP-supported U.S. students and associated personnel to the international scope of research and the possibilities of work in an international setting in a professional career.

The Small Ruminant CRSP has made a concerted effort throughout its lifetime to train young people from both the U.S. and host countries in research leading to advanced degrees. Be-

tween 1978 and 1994 more than 400 students were involved in degree-granting programs. Of these, approximately 58% came from the United States; approximately 43% came from countries in which the Small Ruminant CRSP was actively carrying out research programs or from other countries in which there was a particular interest in research on small ruminants (Fig. 1).

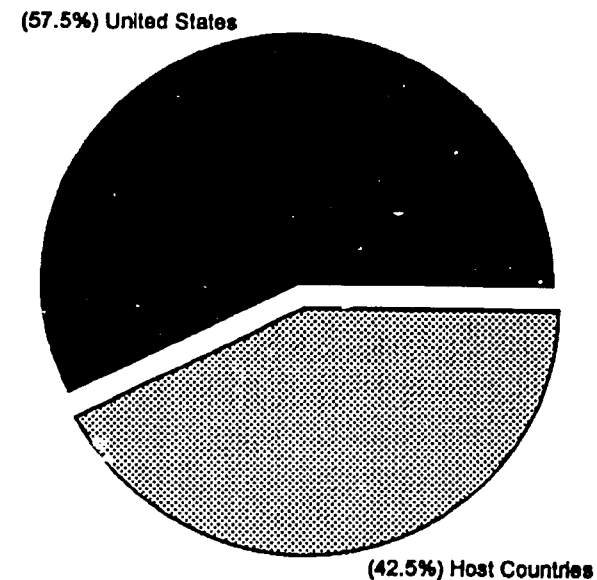

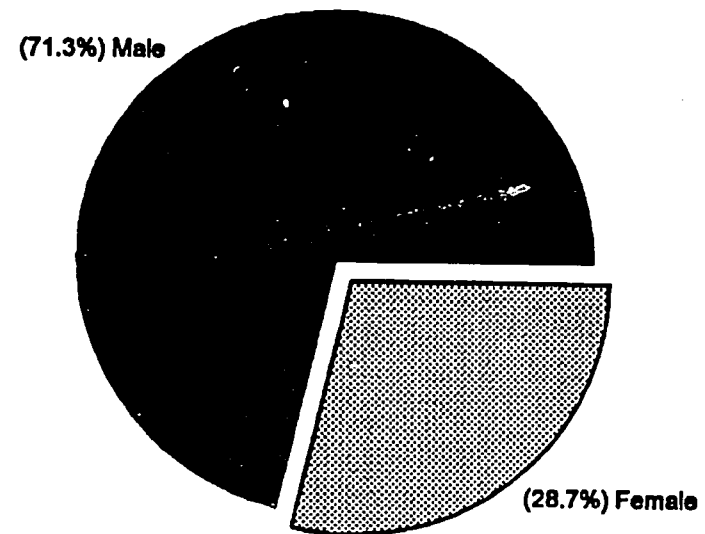

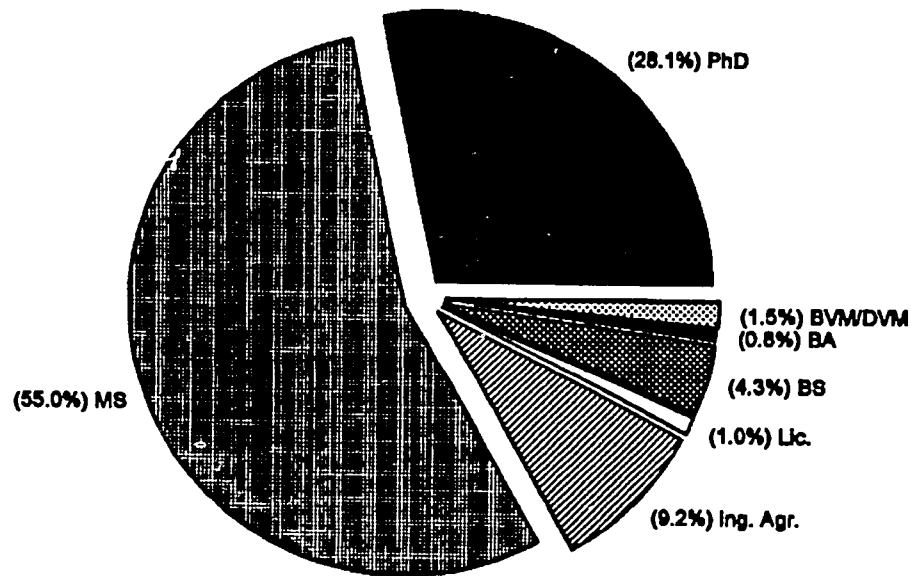

Figure 1. Percentages of SR-CRSP Students from the United States and Host Countries, 1978-1994.

The Small Ruminant CRSP has encouraged student training at both U.S. institutions and host country institutions, as appropriate, for coursework and research activities. Thus some students from host countries have undertaken coursework at U.S. institutions and research in their countries (and vice-versa), and some U.S. students have carried out research in host countries with coursework taken at U.S. institutions. It is important to realize that both U.S. and host country institutions have made major contributions to student training in both a financial and a programmatic sense throughout the life of the Small Ruminant CRSP.

The training of women has been a high priority of the Small Ruminant CRSP, and the recruitment of women has been viewed as a particularly important consideration in light of women's important roles in small ruminant care and research throughout the world. Over the past 15 years, approximately 29% of the student trainees in the Small Ruminant CRSP were women; approximately 71% were men (Fig. 2). These students were involved in small ruminant-related programs in the biological, social and economical sciences.

*Figure 2. Percentages of SR-CRSP Students from the United States and Host Countries by Gender, 1978-1994.*

*Figure 3. Percentages of SR-CRSP Students Receiving Undergraduate and Advanced Degrees, 1978-1994.*

From 1978 to 1994, more than 400 students received a variety of degrees through associations with the Small Ruminant CRSP. The largest percentage of these received Master's degrees (55%); approximately 28% received the Ph.D. (Fig. 3). Smaller percentages in both the U.S. and in host countries received bachelor's degrees (B.A. or B.S.), degrees in veterinary medicine (B.V.M. or D.V.M.), or degrees unique to the host country institution (Lic. and Ing. Agr.).

The major disciplines represented in the Small Ruminant CRSP have included animal breeding and genetics, nutrition, range management, economics, animal reproduction, sociology, production systems and animal health. Over the lifetime of the Small Ruminant CRSP, the largest percentage of students has been trained in range management (approximately 20%) with nearly equal percentages in animal breeding and genetics, with a concentration on small ruminants (19%), and in nutrition, with emphasis on small ruminants (19% and 18%, respectively). Economics and animal health (approximately 13% for both) have attracted other students; lesser numbers have concentrated in the areas of sociology and production systems (Fig. 4). The diversity of training offered to students through degree programs with SR-CRSP and institutional sponsorship has encouraged broad-based enrollment and potentially has offered students a wide range of opportunities for fulfilling professional careers in international work.

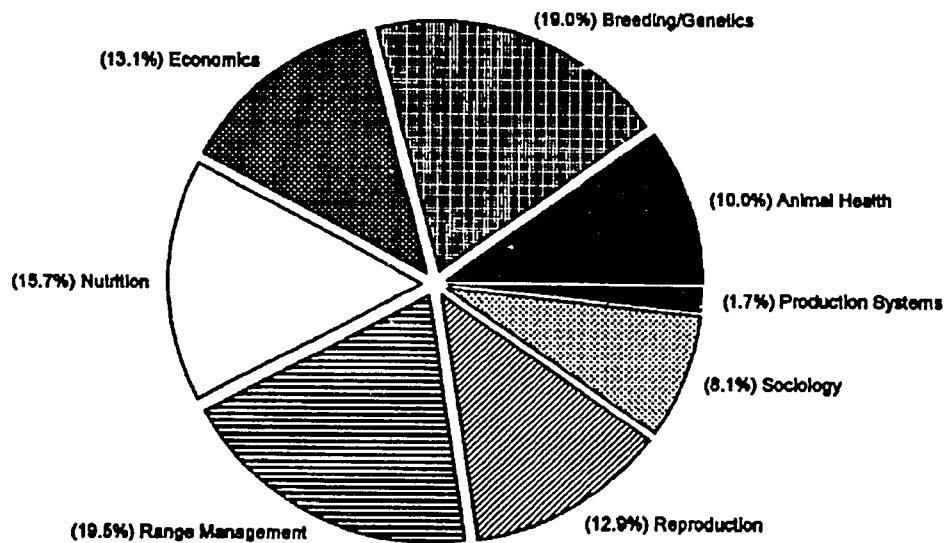

Figure 4. Percentages of SR-CRSP Degree-Recipients by Discipline, 1978-1994.

In addition to formal degree training, the Small Ruminant CRSP has recognized since its inception the importance of non-degree training and continuing education. These sorts of activities are appreciated as being particularly significant in relation to Small Ruminant CRSP goals of sustainable agricultural development and transfer of technology. Through conferences, workshops, short courses and similar focused activities, the Small Ruminant CRSP

has provided a wide range of host country and U.S. people with interests in small ruminants with introductions of new skills; updating of techniques; and opportunities of networking. Through special seminars and guest lectures, Principal Investigators and others associated with the Small Ruminant CRSP have reached a wide audience with information on contemporary issues related to small ruminant research. Funding for such activities has come through both U.S. and host country institutions, private sources and the Small Ruminant CRSP.

Both the degree and non-degree men and women involved in the Small Ruminant CRSP programs provide the foundation for continued small ruminant research and training throughout the world. Some of those who have participated in Small Ruminant CRSP training activities have assumed leadership positions on faculties of U.S. and of host country institutions. Others are involved in extension activities, private foundations, government organizations, research companies, farming operations and many other activities related to small ruminants. Thus the Small Ruminant CRSP, during the course of its 15-year operation, has effectively woven its research and training programs into the fabric of U.S., host country and other developing country activities in meaningful and sustainable ways.
