

# IPM Innovation Lab. and Institutional Capacity Building in Ethiopia

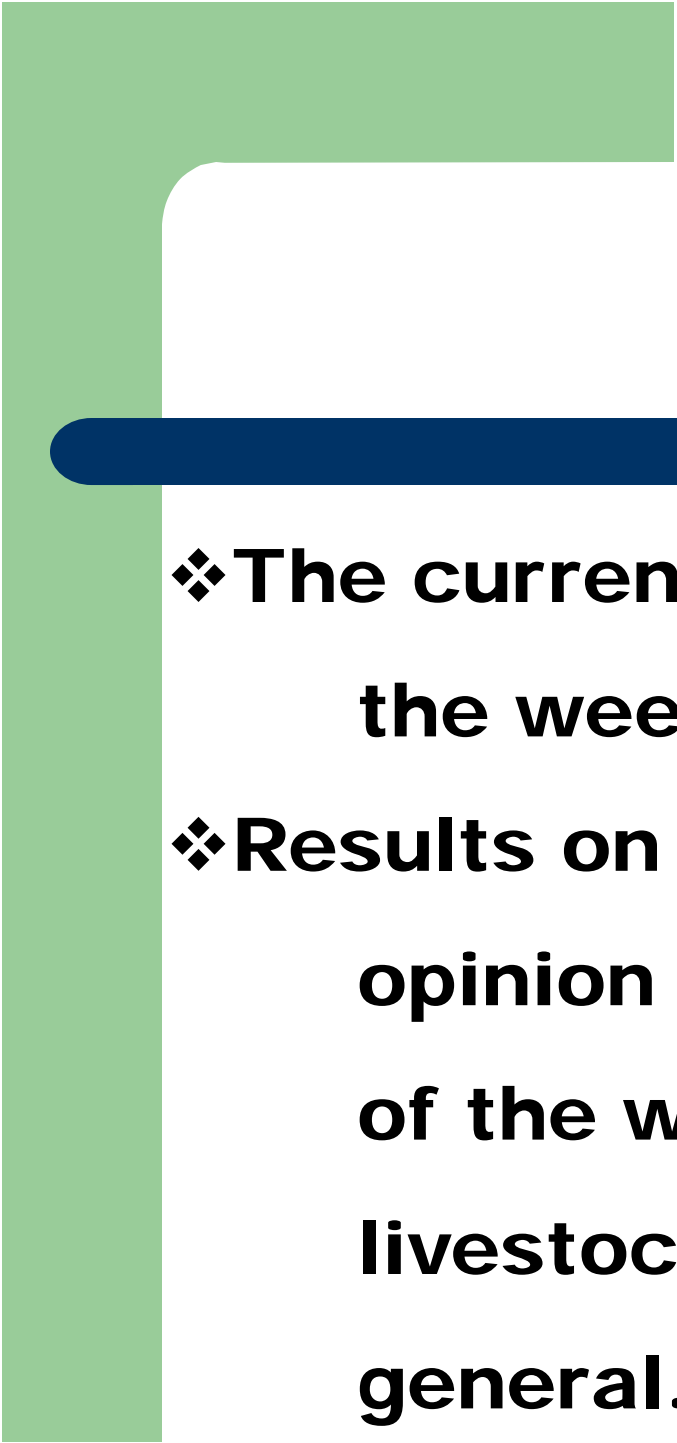

**Kassahun Zewdie (Ph.D)**

**Project coordinator**

**USAID**  
FROM THE AMERICAN PEOPLE

- 
- 
- ❖ The current status and distribution of the weed Parthenium in Ethiopia.
  - ❖ Results on assessment based on opinion pools made on the impact of the weed on crop production, livestock and the environment in general.

**USAID – IPM CRSP** Role In an  
Integrated Parthenium Weed  
Management In Innovation Lab. and  
Institutional Capacity Building in  
Ethiopia

Native: Central & South America, Gulf of Mexico  
(probable centre origin)

# *Parthenium hysterophorus*

Native: Central & South America, Gulf of Mexico  
(probable centre origin)

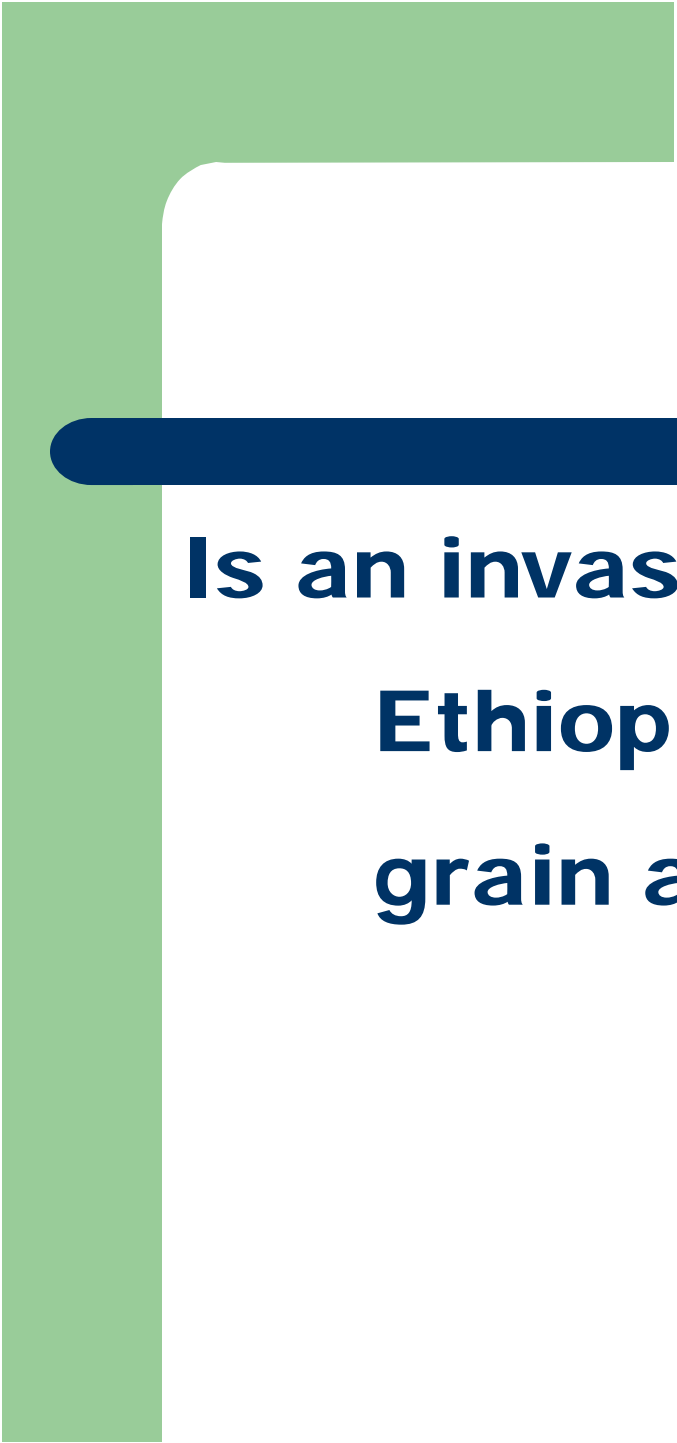

**Invaded:**  
**conservation,**  
**rangeland &**  
**agricultural land in**  
**Australia, India,**  
**Taiwan, southern**  
**China, Papua New**  
**Guinea, Pacific**  
**Islands, Africa (SA,**  
**Swaziland,**  
**Mozambique,**  
**Zimbabwe, Mauritius,**  
**Reunion,**  
**Madagascar,**  
**Seychelles, Kenya,**  
**Ethiopia, Somalia).**

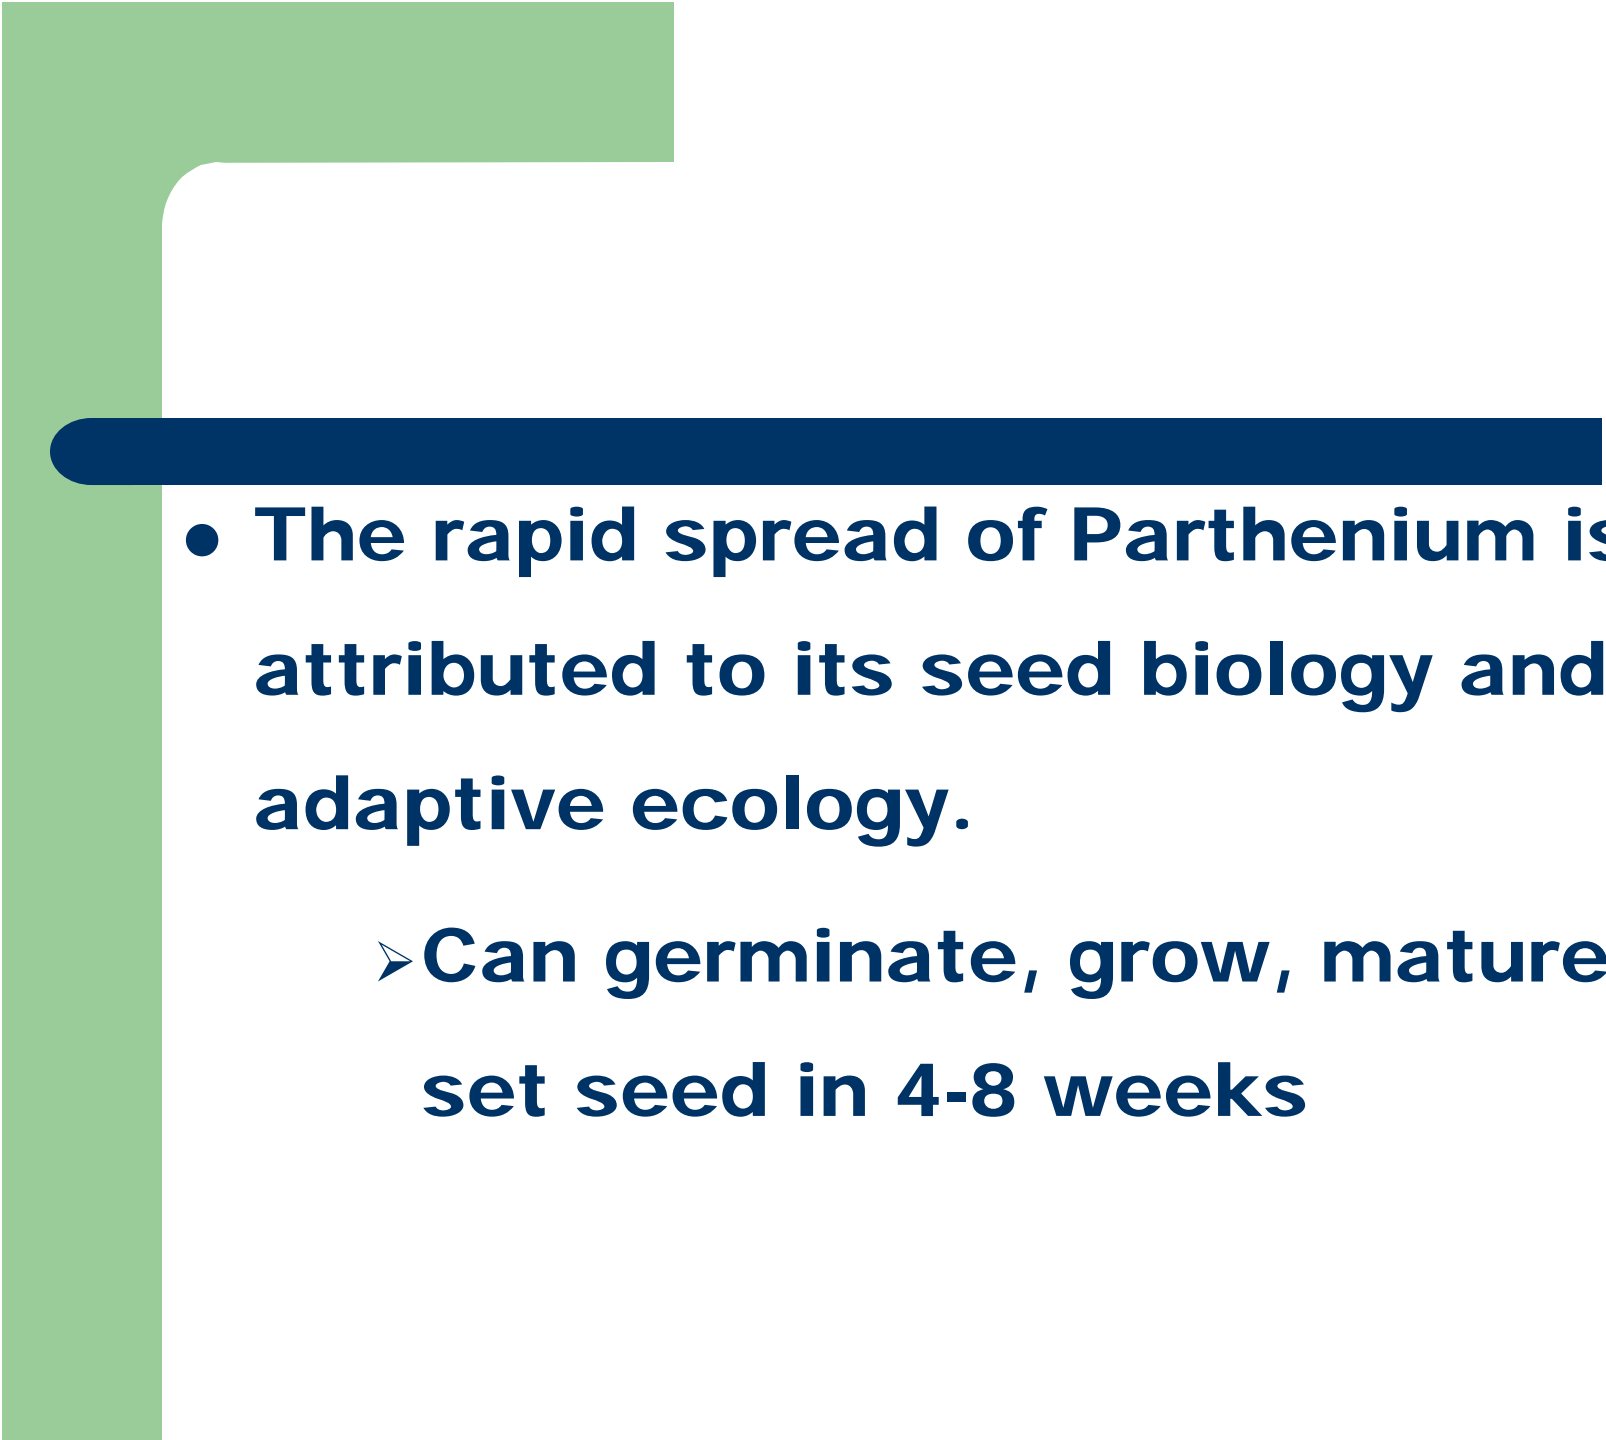

■ Mainland Distribution of *Parthenium hysterophorus*

□ Islands where *Parthenium hysterophorus* is present

Source: Queensland Department  
of Natural Resources

Is an invasive weed introduced to Ethiopia in the 1970's with grain aid.

- 
- The rapid spread of Parthenium is attributed to its seed biology and adaptive ecology.

- Can germinate, grow, mature and set seed in 4-8 weeks

- 
- 
- ❖ Parthenium weed adversely affects food security, biodiversity and human as well as livestock health.
  - ❖ It attained major weed status in Ethiopia during the last 30 years.

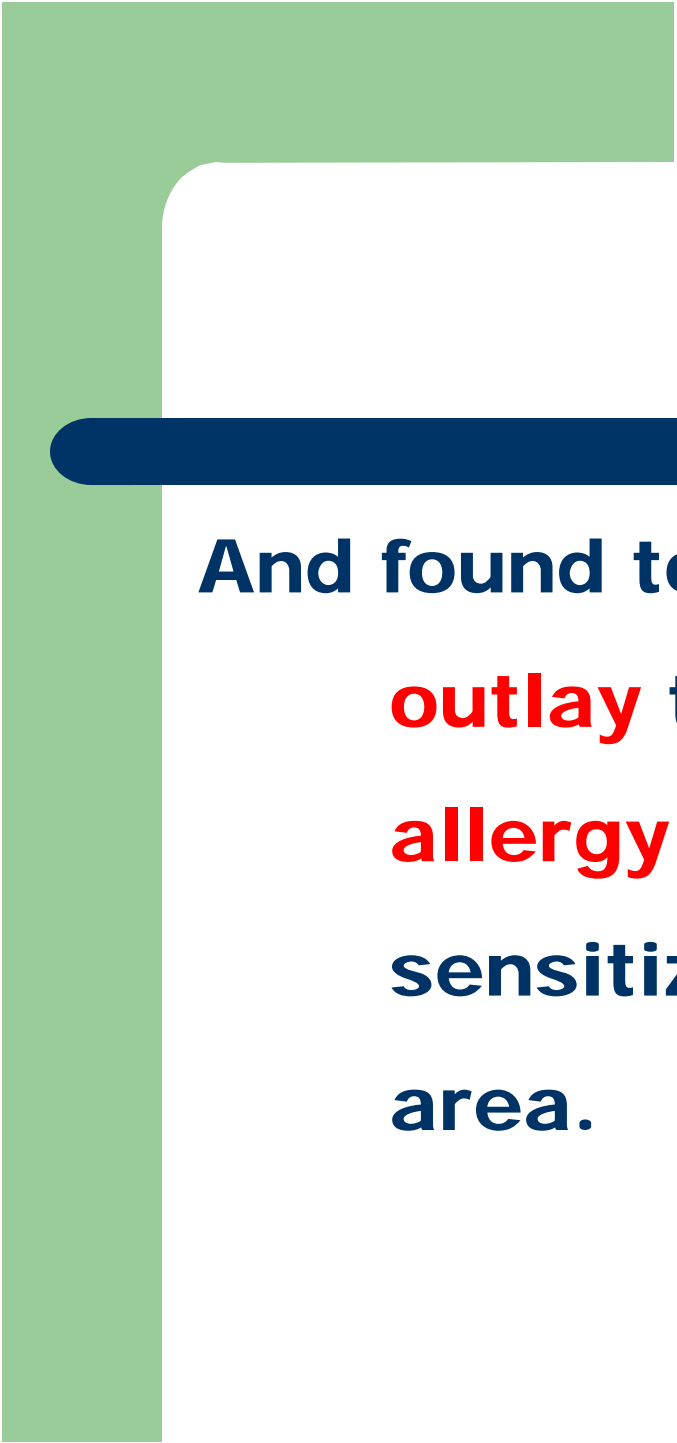

- 
- 
- ❖ Reduces yield (tef, wheat, barley, sorghum, corn, etc.
  - ❖ competes with pasture species .
  - ❖ Yield losses ranging from 40 -100 %
  - ❖ The grain prod-n in Ethiopia is potentially at even increasing risk in the future.

- 
- ❖ When consumed by domestic animals, **spoil their milk and meat**, reducing their value.

# Impacts on human health

Caused human health problem like  
asthma, bronchitis, dermatitis,  
Allergy and high fever.

And found to **have a greater economic outlay** to treat the effects of **allergy** symptoms than none sensitized residents in the same area.

## Impacts on animal health, meat , milk quality and marketing

- ❖ The pastoralists expressed the quality of animal products and their marketability.
  - The meat has bad odour & the quality is depreciated.

- 
- 
- ❖ The **milk has bitter** taste or taint from livestock that fed on parthenium.
  - ❖ Indicated that **nobody** would purchase the **milk and meat** if alternatives were available.

## Impacts on grazing and agricultural lands

- ❖ Replaces natural vegetation, because of its ability to release **toxic chemicals**, and thus it is a threat to one of the **world's richest country of bio-diversity** like Ethiopia.

IPM Innovation Lab. and  
Institutional Capacity  
Building in Ethiopia

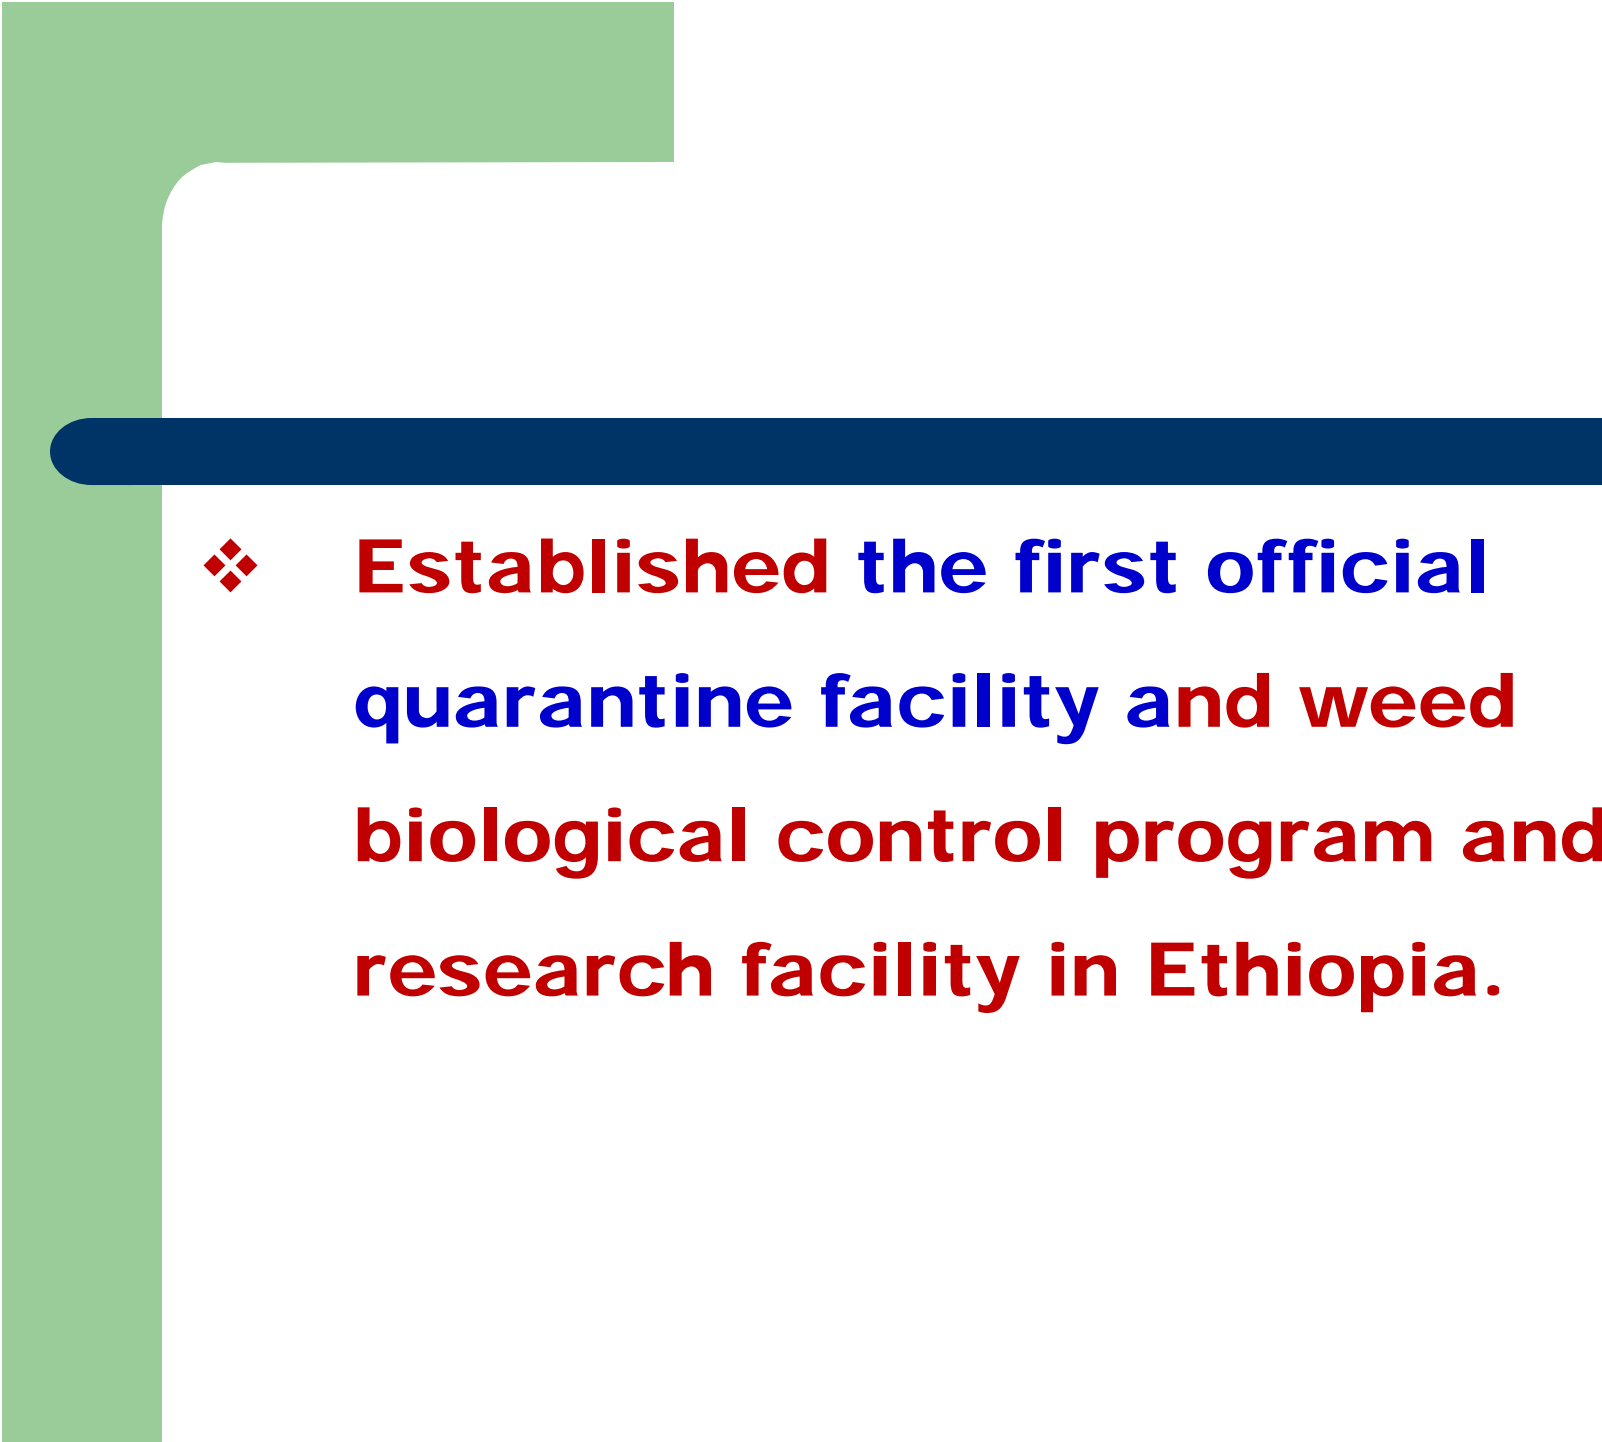

## IPM CRSP contribution

- ❖ Senior scientists for short term work and collaborative research support in Ethiopia;
- ❖ Graduate research /education for collaborating personnel at collaborating U.S. institutions as approved the work plan;

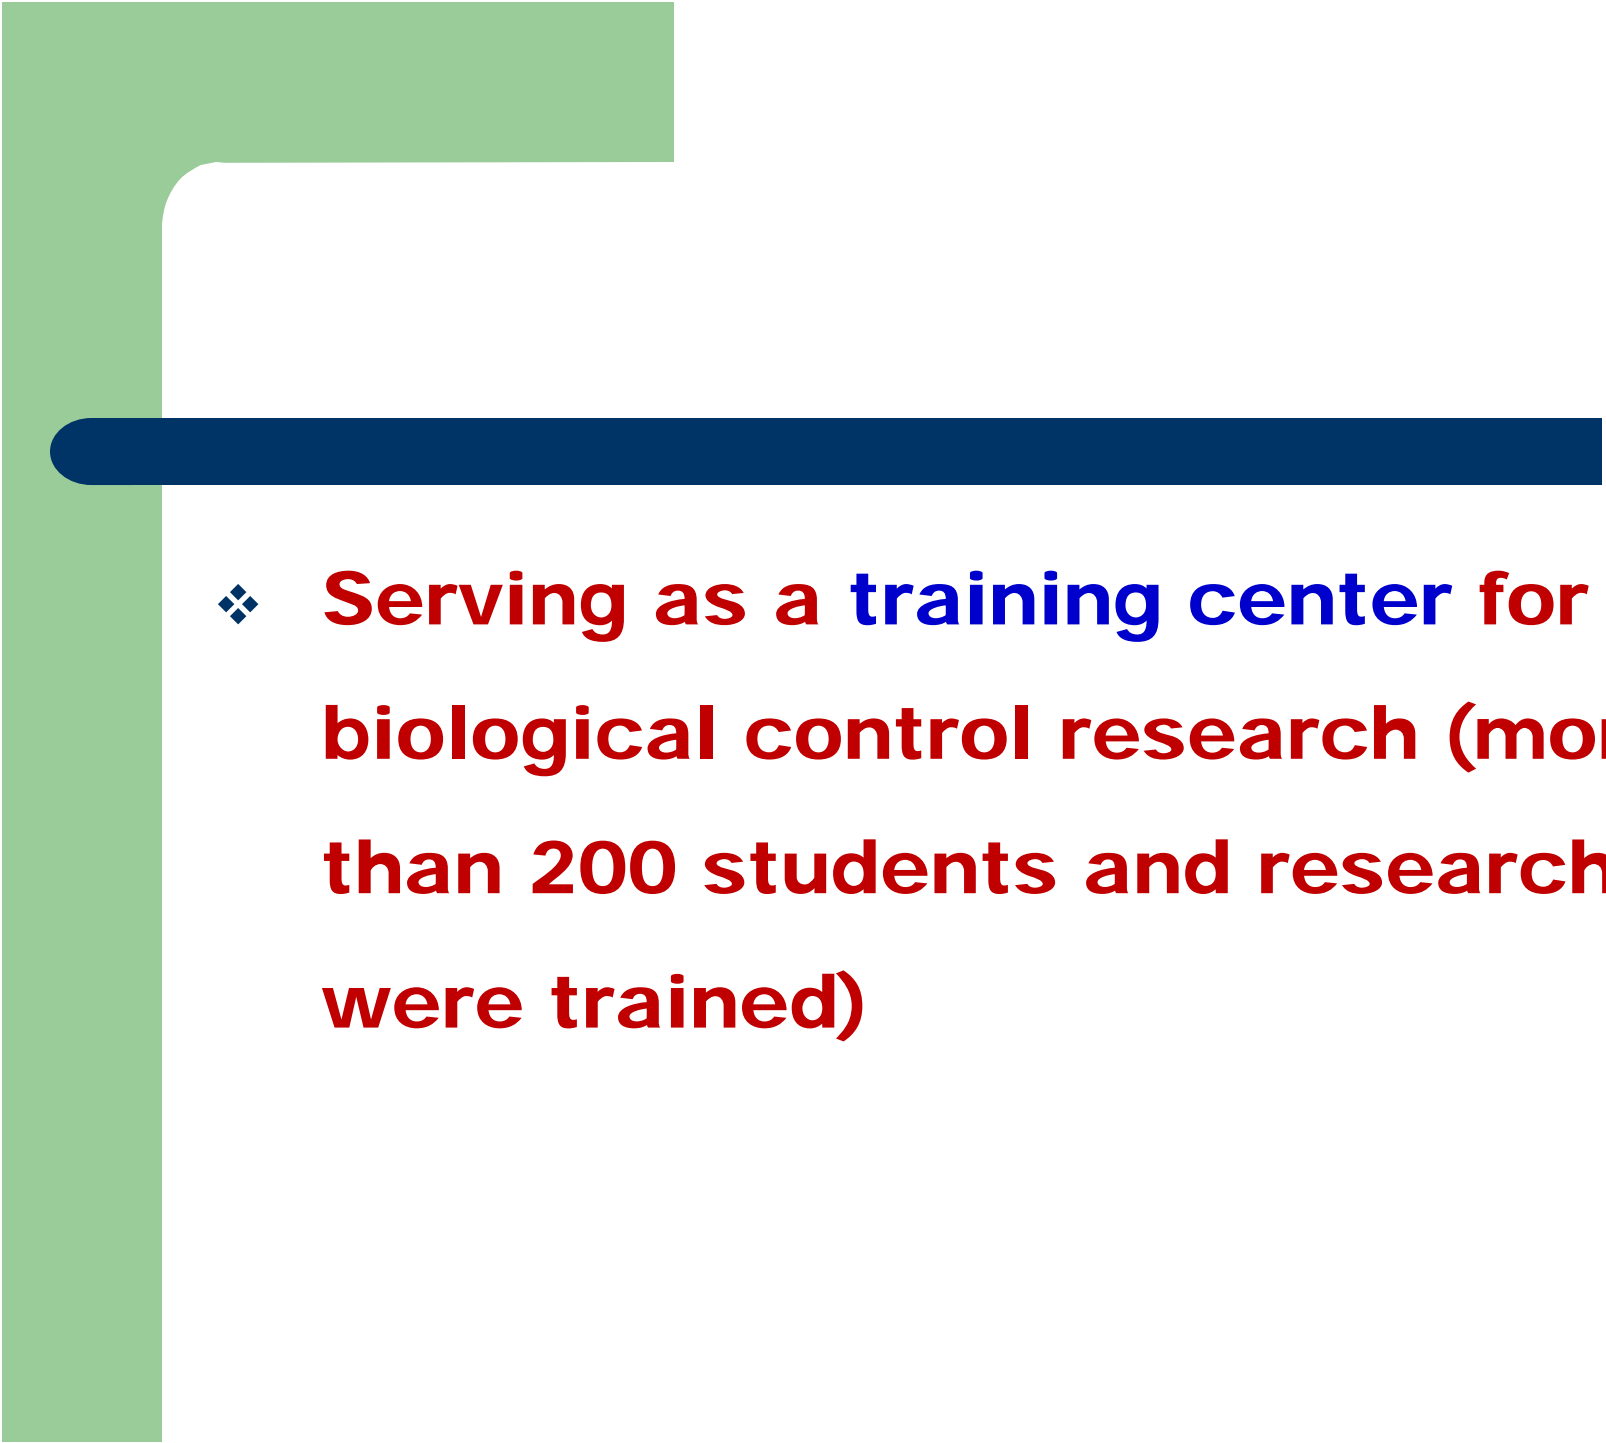

- 
- 
- ❖ Supplies, equipments, and travel for IPM CRSP collaborating personnel;

# Project out put

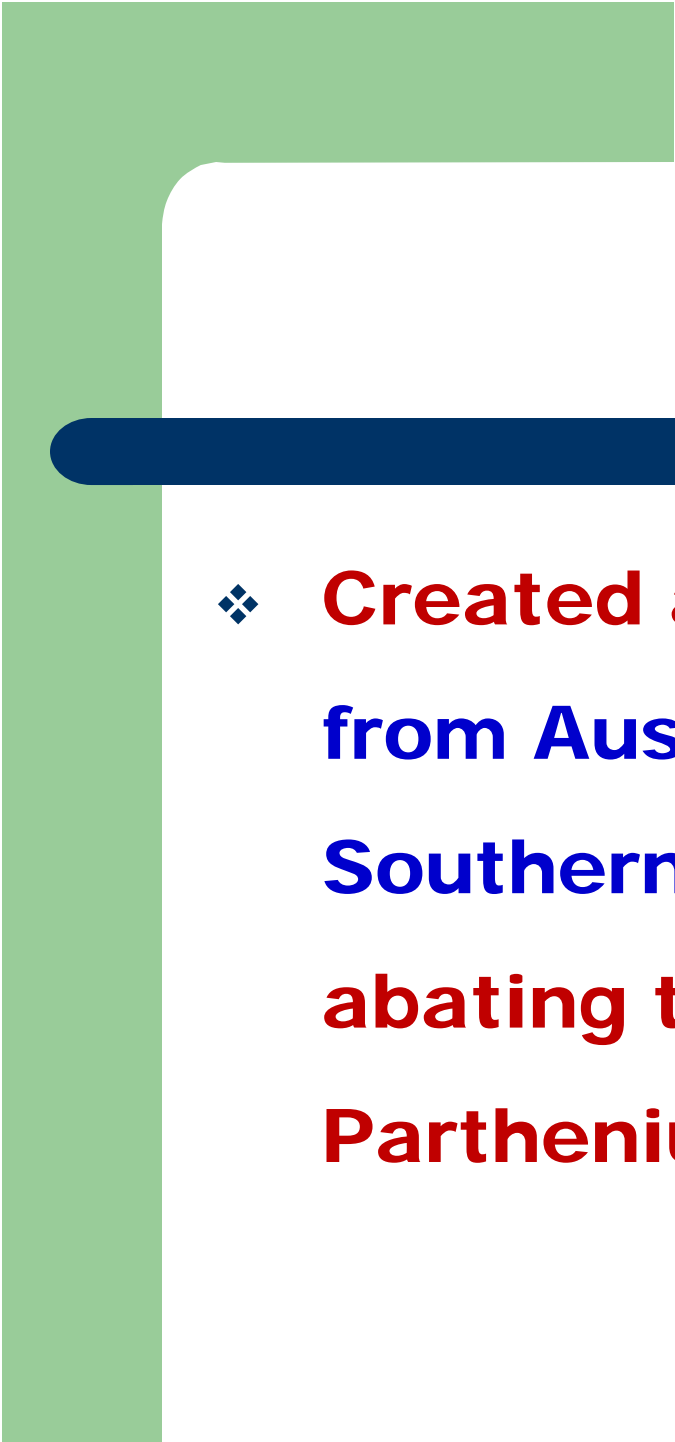

- ❖ Distribution survey data for Ethiopia were compiled into a database and mapped.

- 
- ❖ Established the first official quarantine facility and weed biological control program and research facility in Ethiopia.

- 
- ❖ Serving as a training center for biological control research (more than 200 students and researchers were trained)

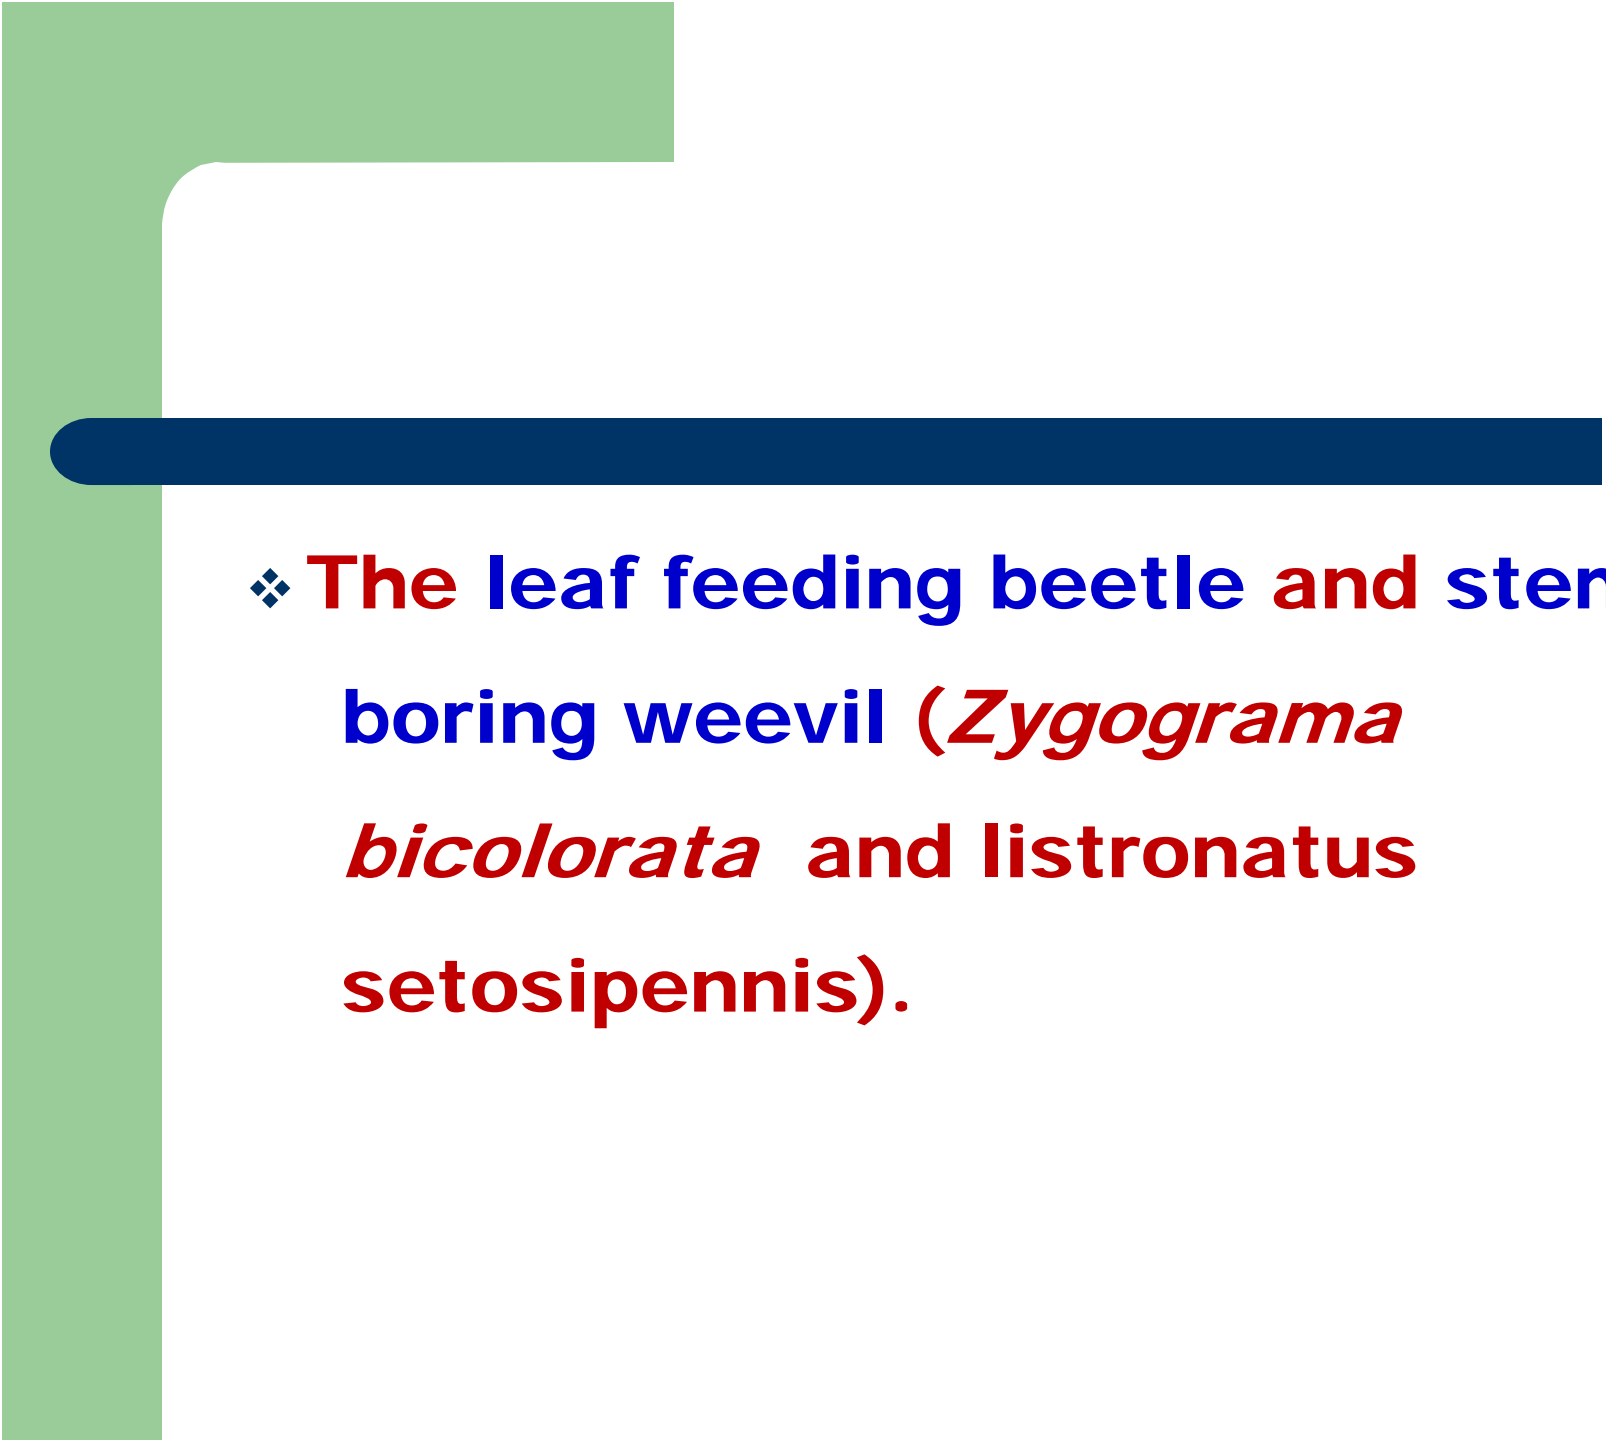

- 
- 
- ❖ The experience gained from the design and conversion of a glasshouse to a quarantine facility may also serve as an example for other developing countries that embark into weed biological control for the first time.

- 
- 
- ❖ Created a net work of scientists from Australia, USA, Eastern and Southern Africa, India devoted to abating the adverse impacts of Parthenium.

## Biological agent imported

- ❖ Tested a host ranges of bio-control agents for the control of parthenium.

- 
- ❖ The leaf feeding beetle and stem-boring weevil (*Zygogramma bicolorata* and *listronatus setosipennis*).

- 
- ❖ Secured land for establishing a mass rearing center for parthenium leaf feeding beetle (*Zygogramma bicolorata*) at welenchiti
  - ❖ Will be released in June - July 2013.

# Human resource development

- ❖ Seven graduate students, two of them female were supported by the project have graduated with an M.S. degree.
- ❖ All conducted their M.S. thesis projects on parthenium.

- 
- 
- Five Ethiopians have been trained in rearing and testing of biological agents and quarantine procedures in SA

**Mechanical (hand pulling, slashing , burning before seed setting)**

*Prior to importing the biological agents the facility was inspected by known scientists from SA, Australia, India for meeting international standards (2<sup>nd</sup> partners meeting and workshop)*

*During the 2<sup>nd</sup> partners meeting and work shop*

The quarantine facilities was evaluated before the second bioagent *Listronatus* introduced

# Short term training

**Four Researchers & two TAs from EIAR trained in SA**

- *Nursery Establishment*
- *Culturing and maintaining bio-control agents*
- *Host range testing , Bio-safety*

# IPM CRSP Team Visit Sept, 07

*Biocontrol facility at Ambo Research Center inaugurated in October 2007.*

## Objective 3. Biological control

After the facility was inspected by IPM CRSP team and South African scientists the leaf feeding beetle (*Zygogramma*) introduced in October, 2007

**Larvae of *Zygodontia* feeding on *parthenium* at PPRC quarantine**

**Defoliated *parthenium* plants in rearing cage at PPRC**

The second biocontrol agent, *Listronotus setosipennis* has been introduced from SA

## *Acknowledgements*

- *Financial and technical assistance of **USAID, IPM-CRSP** and **EIAR** for upgrading quarantine facilities is gratefully acknowledged.*
- *Thanks are expressed to senior scientists **Lorraine** and **Andrew** of **SA, ARC-PPRI** for their valuable support and advice.*

THANK YOU
