

# **Peanut and Mycotoxin Innovation Lab**

## **Project Proposal Concept Notes**

**Project Title:**

**Project Category (You may submit more than one, but submit a separate concept note for each)**

**Peanut Value Chain** \_\_\_\_\_

**Genomics and Breeding** \_\_\_\_\_

**Mycotoxin** \_\_\_\_\_

**Principal Investigator(s) and Institutional Affiliation(s):**

**Describe the major constraint(s) to a healthy peanut value chain in the target country or countries in which you plan to work (or globally for genomics and breeding or mycotoxin projects).**

**Describe a work plan that addresses those constraints. Include the anticipated major project outputs and outcomes.**

**A detailed budget is not required at this time, but give us your estimated totals by year.**

**Year 1 –**

**Year 2 –**

**Year 3 –**

**Year 4 –**

**Total -**

**Identify the major players and their roles.** Multi-institutional and multi-disciplinary approaches are strongly encouraged. Peanut value chain projects should try to address an entire peanut value chain or at least a critical segment of a peanut value chain in at least one target country. While research is the primary goal, a connection between that research, technology transfer and economic development is critical. Partnerships with in-country collaborators that are in key positions to accomplish technology transfer and economic development are expected.
